

Meet the STOREM project team at University for International Cooperation in Costa Rica

The University for International Cooperation is a non-profit organization, established in Costa Rica, since 1994.

Through its Faculty of Environment and Development, it participates in the STOREM Project, contributing its experience in issues relevant to environmental management, especially in the area of sustainable tourism. As one of the main products of this collaborative process, its Master's program in Sustainable Tourism Management will be updated.

From UCI we direct a very important component of the project, related to the establishment of an observatory focused on sustainable tourism and environmental management together with the other participating institutions.

The direction of the Project at UCI is led by Allan Valverde, dean of the Faculty of Environment and Development, who is a specialist in issues related to protected areas and environmental management in general, and with the support of the rectory through Dr. Eduard Müller as rector, who is a renowned Costa Rican environmentalist and a world leader in regenerative development.

The team is also made up of the biologist Tania Moreno, coordinator of the UNESCO Chair of World Heritage Sites of Humanity, the professors Mario Socatelli and Carlos Briceño, of recognized Latin American trajectory in sustainable tourism, the specialist in protected areas Sara Zúñiga and the forestry engineer Paula de la Paz.

This team is supported by the communications department, the Information Technology department and the administrative management led by Elmer Chavarría, among other collaborators.
